Gap

- ❖ Anti-corruption interventions and border service improvement programs tend to focus on the predominantly male large-scale vs. women dominated small-scale trade
- ❖ How gender dynamics work at borders needs to be factored into policies (*most small-scale cross-border traders women; customs/police are men*)
- ❖ Data are patchy, small N surveys,

Questions

1. How can we leverage mobile phones to acquire better data and hence insights from traders on experiences with corruption of small-scale traders crossing East African borders?
2. What new insights can we glean from observing the impacts of Covid border restrictions?
3. How might reporting using mobile phones work as an anti-corruption tool?
4. In which ways can we use this research to improve support for small-scale cross-border traders and advocate for improvements in border

Methods: Iterative Phone

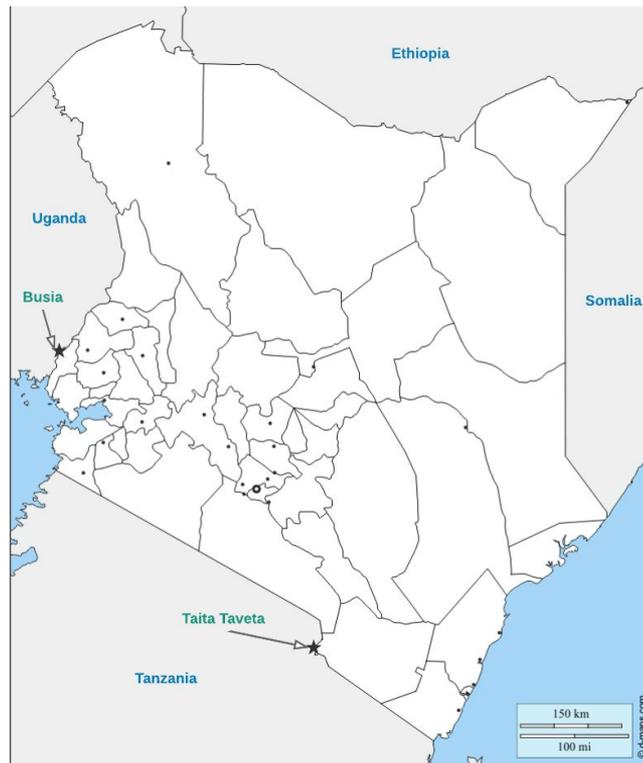

Surveys

2,200+ calls from Busia, Malaba (Kenya-Uganda) and Taveta (Kenya-Tanzania) with Kenyan phones (mostly Kenyan), 80% women, 20% men

Recruited pre-Covid
February-March 18th
2020;

4 monthly surveys

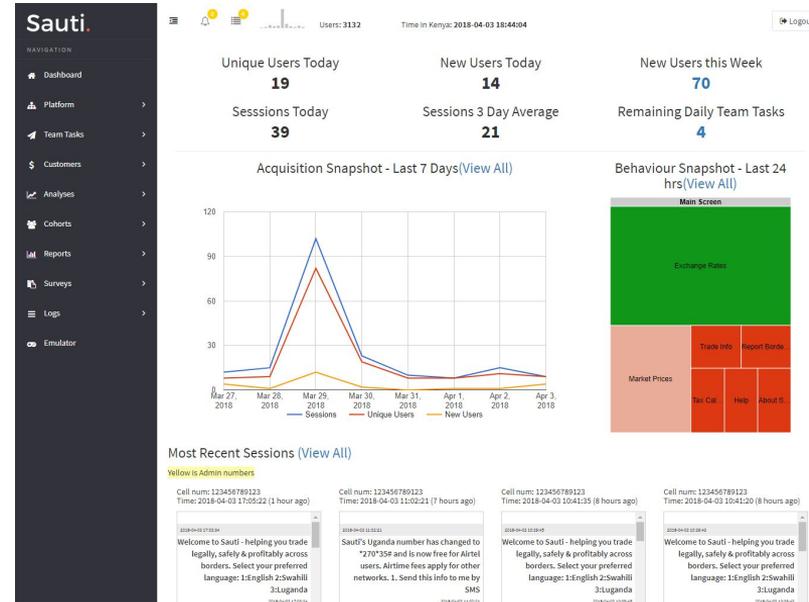

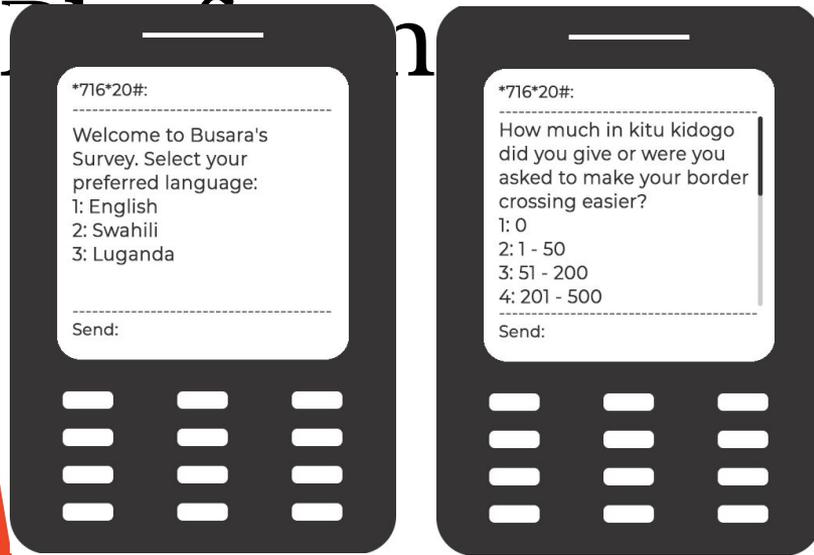

December 2020, January 2021

Anti-Corruption Evidence
Research Programme

Finding: Corrupt Actors Adapt

Police are the most feared actor; with evidence of opportunistic extraction on non-gazetted routes; kitu kidogo goes up when customs restricts movement

“One Ugandan police officer once shot dead my broker while crossing with goods via the alternative route ‘panya

Research Programme

Finding: Gender

Dynamics Shift

Men report higher than average “kitu kidogo” to cross the border compared to women. Men also report higher levels of harassment and higher transport costs on average. Young men using boda- bodas are at particular risk especially during times of COVID restrictions as women traders relied on

We asked traders their perception... most men and around half of women agreed that men paid more and faced more harassment at this time...

“I encountered bad cops who demanded exorbitant bribes.”

Research Programme

Finding: Ungazetted Routes Offer

Advantages

Traders appear to prefer the ungazetted border if they have lower value goods;

But they appear to be paying more “kitu kidogo” in at the formal border; amount paid goes up with value of goods; trip discomfort goes up with extra amount paid.

Some Overall

Insights

- ❖ Covid restrictions were a “natural experiment” in severe restrictions for small-scale traders at customs. It created great, gendered hardship: More women dropped out; men (including transporters used by women) disproportionately faced harassment and elevated **extraction-lesson in unintended consequences of policies that ignore “ungazetted routes” & how they interact with customs**
- ❖ Money paid by traders when taking ungazetted routes is seen as unjust even as it facilitates passage (collusive)

Some Final

Thoughts

❖ We can creatively leverage mobile phones to acquire better data from traders on experiences with corruption & how it works: **More to explore on how to make that work (incentives) & move towards accountability**

❖ Traders wanted more opportunities for transparent bottom up feedback mechanisms (they liked the idea of reporting via mobile phones on border service quality and sharing information on platforms and the

Selected Policy

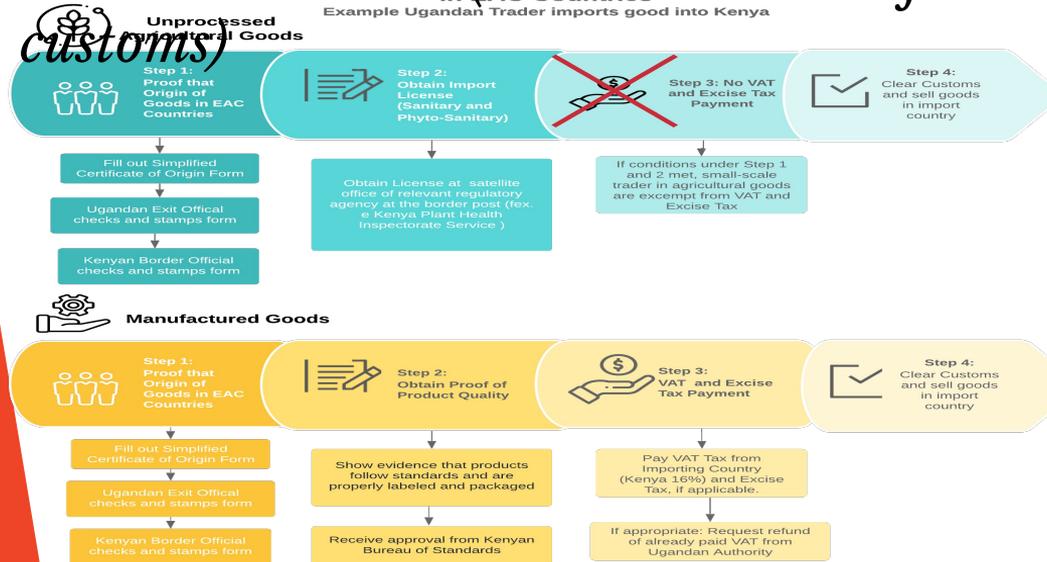

Recommendations

- ❖ Strong evidence for making customs more friendly to small-scale traders in consultation with them, paying attention to gender and facilitating other modes of transportation besides trucks; this may help reduce extractive power of police
- ❖ Traders raised the desire for formalization of ungazetted routes since the lack of recognition facilitates extraction and harassment. How this would be done needs careful thought.
- ❖ Police reform must be explored at borders (not just customs). A large fraction of traders felt that there are too many police at the border

Customs vs Ungazetted

How do traders choose and how do they interact?

Covid restrictions (severe barrier at formal customs)
